LinkedIn GitHub with a code demo

English: **B2** (+ complex expression, – listening)
German: **A2** (+ conversation, – vocabulary)
Czech: **Native**

Software Developer with a strong QA mindset, analytical focus, and a mathematical background:

- **22 years of SW development**: Kotlin, C#, C++, SQL, SAP/ABAP, full-stack ASP.NET;Git,Claude Code.
  - Including 12 years as a **SAP Business Analyst**: data flows, data integrity, migrations.
- **QA mindset**: Proactively thinking through risks, potential bugs, and hidden dependencies.
  - Systematically looking for **inconsistencies in requirements**, unstated assumptions, and potential misunderstandings.
  - **Defensive programming**: assertions, checksums, warning indicators for users, etc.
  - Emphasis on **testability**, DRY, SOLID, and clear **separation of responsibilities** ("contracts").
  - **Proactively adding unit tests and self-diagnostics**; refactoring for greater robustness.
- **Independent Consultant**: Delivered SAP functionality end-to-end, from requirements gathering and impact analysis through implementation, testing, deployment, user training, support & bug resolution.
- **Mathematician (MFF CUNI)**: Formal logic, abstract algebra, rigorous proofs of correctness.
  - Analytical thinking, attention to detail, and systematic work with **edge cases**.
  - **Own optimization algorithms** (logistics, manufacturing) with results near state-of-the-art.
- **Honesty, initiative, resourcefulness**. Unusual perspectives and solutions. Talent for teaching and explaining.

Preferred workload: **20 hours/week, 70–80% remote work.**

I work best in a **small team with stable, independent tasks**, allowing me to focus on the quality of my analytical work.

Professional Experience

02/2020–present: Blindspot Solutions, part of Adastra Group | **Combinatorial Optimization**

- Development of the OptiSuite module for optimization using simulated annealing.
  - Improved efficiency, caching, robustness, user-friendliness, documentation, and functionality.
  - Identified numerous bugs and proactively added many missing unit tests.
- 2023–present: **Independent development of optimization algorithms.**
  - Redesigned their algorithm for the **Vehicle Routing Problem** (VRP): both the basic variant and Pickup and Delivery. Achieved results within 2% of the best-known benchmarks.
  - For manufacturing (**Job-Shop Scheduling Problem**), developed a program achieving results within 0.5% of the best-known benchmarks.
- Stack: Kotlin, IntelliJ, jUnit+Mockito, Git+BitBucket, Claude Code.

04/2019–01/2020: Cegeka | **Banking Portfolio Management App**

- Backend: SQL, C#, WebServices. GUI: WebForms, Telerik.
- Developed complex grid-layout dialog (column formatting, DB persistence).

04/2018–03/2019: Bee Interactive | **Truck Loading Management**

- Full-stack dev: SQL, C#, Razor/HTML, JavaScript, jQuery.
- ASP.NET MVC, Entity Framework, IQueryable, DatAdmin.
- Created unit tests in nUnit with Mocking libraries.

08/2005–03/2018: KCT Data | **SAP/ABAP Consultant, Analyst, Developer**

- Onboarding/mentoring of new colleagues. Internal SAP dev & consulting for HR and Accounting.
- HR/FI batch data loading; reporting across HR, SD, MM, DMS, FI, CO.
- Client projects (consulting, spec, implementation, support):
  - RolesRedesign: Streamlining user permissions.
  - Incoming Mail Book: Email/scan sorting & classification workflow.
  - Attendance Management: Clock-in/out and overtime tracking, productivity-linked bonuses.

11/2003–07/2005: Xanadu (AAC Solutions) | **C++ Programmer**

- Large-scale configuration software for PVC windows: SAP extension built on C++ and Windows MFC.
- Feature development; proactively enhanced application robustness and diagnostics.

Preferred Work Style: Stable requirements, independent tasks, 20 hrs/week.

I bring the most value through independent analytical work and thinking through technical problems. I work best with **stable priorities, limited meetings, a part-time position, and predominantly remote work**. I prefer to address user needs through direct consultations rather than extensive organizational and coordination work.

Education: Applied and theoretical mathematics, theoretical computer science.

1999–2003 Faculty of Mathematics and Physics, Charles University in Prague

- Graduated with honors, Master's degree (Mgr.)
- Mathematical logic, abstract algebra and its applications in computer science. Computability theory.
- Master's thesis: Introduced a new type of computational automaton applicable in linguistics.

1996–1999 Faculty of Applied Sciences, University of West Bohemia in Plzeň

- Numerical methods, engineering math and mechanics, computer modelling of physical processes.
- Programming: MATLAB, Pascal, Prolog, Lisp, Ada; DOS system programming.
- "English for Engineering Professions" program.
- Individual coaching in differential equations under Ing. Brandner.

1992–1996 Mikulášské Gymnázium (Grammar School) in Plzeň

- Specialized mathematics class; achievements in programming and physics competitions.
- Senior project: Optimization using Genetic algorithms.

Personal Background

Interests: Exploring AI limits, strategic games (Chess, Go, 4X, game development), history of economics.

Hobbies: Crosswords and puzzles, fantasy, sci-fi, musical composition, improvisation, jamming.

Past Hobbies: Contributing to Wikipedia, hobby programming: games, game AI, physical simulations, computer graphics.
